Secure login, signing and encryption by using virtual smart cards

Digitize securely and ensure productivity in your organization. Nexus Smart ID makes it easy to provision and manage virtual smart cards on mobile devices and laptops.

Secure
Same level of security as a physical smart card.

Convenient
Easy to use without the need for additional physical devices.

Integrated
Seamless experience based on native use cases.

Go passwordless and secure day-to-day business by complementing your physical corporate ID badges with digital identities on virtual smart cards. This can easily be done by implementing a smooth multi-factor authentication (MFA) solution to external resources which protects data with secure encryption, and integrity through reliable signing.

TPM based Virtual Smart Cards

Physical Smart Cards and Tokens

Mobile Virtual Smart Cards

Accelerate secure work-force mobility

Simplify the full lifecycle management of your users' digital identities on smartcards, mobile phones, tablets and laptops. This enables you to take advantage of ready-to-use workflows, automation and self-service functions. You can use your own CA or connect to a trusted third party to issue three certificates in one go (authenticate, encrypt & sign).

Windows logon • Remote access • Secure email • Digital signing • Encryption of data
