

Let your users administer their own access cards with Nexus Service Station

Nexus Service Station is a hardware and software package that lets your users administer a range of tasks required during the life-cycle of their access cards, such as capturing photos, entering user data, locking and updating cards. This means that your costs for card administration can be dramatically reduced.

Nexus Service Station is preferably installed in a public area to which most users have access, such as the reception or the lunch room. The users identify themselves at the station with their username and password, their domain login credentials, or their smart cards.

The camera and all other electronics are well encapsulated and protected against damage and intrusion, and the cabinet is secured with a 22-milimeter pressure cylinder lock. Nexus Service Station uses touch screen and the software is locked down to a special kiosk mode to prevent improper usage of the station.

Robust construction

Protected against damage and does not need attendance.

Easy to use

Intuitive user interface and easy-to-understand workflows.

Protected against damage

Nexus Service Station is a robust stand-alone station in steel casing and it is by default equipped with a PC, an advanced DSLR camera, a smart card reader, a signature pad and a metal keyboard. The station can optionally be equipped with a plastic card rewrite printer.

Easy to use

Nexus Service Station has an intuitive user interface and easy-to-understand workflows.

The height of the station is adjustable via easy-to-access buttons below the keyboard. This enables the user to adjust the location

Key features

- Robust construction, with all electronics well-encapsulated and protected against damage and intrusion.
- Intuitive user interface and easy-to-understand workflows.
- Easily integrated Nexus Smart ID management solution.
- Predefined package for registration and renewal of the Swedish professional health care card, SITHS

of the keyboard, camera and touch screen to suit them perfectly, regardless of whether they are tall, short or using a wheelchair.

Easy to integrate

Nexus Service Station software implements the end-user workflow using a wide range of views for photo capturing, user registration, smart card management, card printing, signature capturing, end user acceptance of terms etc. The workflow and views can be configured using different settings. Also, the general look and feel of the application can be customized.

- 1 Built in camera
- 2 Touch screen
- 3 Integrated printer
- 4 Smart card reader
- 5 Keyboard in metal
- 6 Adjustable height
- 7 Easy to maintain and keep clean

The flexibility of the software and the easy integration capabilities makes Nexus Service Station ideal for enhancing identity and access management systems with self-service kiosk capabilities. Nexus Smart ID management platform (Nexus IDC and Nexus PRIME) leverage the Service Station as a part of its standard package.

Nexus Service Station is also commonly used for registration of user data for ordering and renewal of the Swedish professional health care card, SITHS.

When used as a stand-alone self-service kiosk the data collected about the users, such as photos and signatures, is stored either locally or at a designated location in your network.
