

# Release note Nexus OCSP Responder 6.2

Version: 6.2

Release Date: 2021-04-09

## Main new features

### Added 'nopinpad' and 'tokenlabel' keystore options

These two optional keystore configuration parameters have been added. Read more here: [Key management section](#).

## Improvements

### PKCS#11 response signing performance improvements

This improves the performance when signing OCSP responses by pooling the PKCS#11 sessions. This will greatly reduce open/close session operations through the PKCS#11 library, which could cripple the HSM during high load. You can also use EC signing keys for even better performance.

## Detailed feature list

For a detailed overview of changed functionality, deprecated functions and corrected problems, see **Release.txt** which is provided with the installation media.

## Contact

### Contact Information

For information regarding support, training and other services in your area, please visit our website at [www.nexusgroup.com/](http://www.nexusgroup.com/).
