

# Card management

Card data is primarily managed in the Smart ID management system, and exported to the physical access control system (PACS).

To manage the complete lifecycle of cards, there are many workflows to handle the different use cases for **issuing**, **maintaining**, and **locking cards**.

Workflows for employee cards and external cards are the same, apart from that the two card types are connected to different card layouts and often have different validity.

## Use cases

- Issue physical ID card
- Maintain physical ID card
- Lock physical ID card

For more information on the roles in the workflows, see [Standard roles in PRIME](#).
