

# PDF Signing API

With the Nexus PDF signing API, you can build in PDF signing functions into your own application.

## Use cases and examples

To get started, you must first do an initial setup in the Nexus GO portal:

- [Set up PDF Signing API in Nexus GO](#)

For every time you want to use the API for signing operations, you must first authenticate:

- [Authenticate to the PDF Signing API](#)

For more information and examples on the signing operations, see the following links:

- [Create signing request in PDF Signing API](#)
- [Sign document with PDF Signing API](#)
- [Get request status or signed document](#)

For more information on how to validate a signed document, see here:

- [Validate signed documents from Nexus GO PDF Signing](#)

## Demo application

For help on how to use the PDF Signing API, you can take advantage of the following demo application.

- Demo application: <https://levepo.azurewebsites.net/>
- Code: <https://github.com/technologynexus/nexusgo-signingportaldemo>
