

Personal Mobile roadmap

This article describes planned features and improvements in [Nexus Personal Mobile](#).

In progress

Planned

Latest release

For news and release notes, see [Personal Mobile news](#).

Coming features

Feature	Status	Products
Dynamic App Branding Make the app appearance neutral with capability to make parts of it dynamically branded during message exchange with back-end server. Static branding as previously offered will be discontinued.	In progress	Personal Mobile
Windows Logon over BLE Integrate Windows Logon over BLE functionality into Personal Mobile to utilise digital identities provisioned to the device, for secure remote login/unlock of Windows based laptops and computers.	In progress	Personal Mobile
Intunes and S/MIME support Integration with Intunes for mobile device management (MDM). Primarily for installation of S/MIME certificates in preparation for when Outlook will get S/MIME support on both Android and iOS in 2019.	Planned	Personal Mobile
Mobile Visual ID Implement visual ID, by rendering physical card in Personal Mobile with authentication and signing certificates issued using standard workflows. Additional user data will be stored in ICAO passport standard, such as image, biometric template, and address.	Planned	Personal Mobile

Nexus reserves the right to change the roadmap due to recent requests.
