

Templates

Templates are used in [Nexus PRIME](#) to define data objects, such as identities, cards, or certificates; what data pool to store the data in, what states the data object can have, and what processes and forms are associated with it.

Configure templates

See the following instructions for more information:

- [Set up identity template](#)
- [Set up card template](#)
- [Set up requests template](#)
- [Set up batch order template](#)
- [Set up certificate template](#)
- [Set up meetings template](#)
- [Set up state graph](#)
- [Set up number ranges](#)
- [Set up report template](#)
- [Set up email template](#)
