

# Digital ID

**Nexus Smart ID Digital ID** is a solution used for centralized identity and credential management. The module includes best practice use cases to manage digital IDs in the enterprise. Digital ID offers the solution to issue and manage smart cards, mobile IDs and software tokens with PKI certificates during the full lifecycle. Digital ID ensures transparency and traceability in enabling qualitative permanent or temporary corporate IDs for employees and consultants. The solution consists of administration tools, self-service, and delegated approval routines.

Features	Digital ID
