

Mobile two-factor authentication to online applications with seamless end user experience

Nexus Personal Mobile is a mobile app for online two-factor authentication (2FA) for employees accessing corporate IT systems, and consumers and citizens accessing online services. Personal Mobile is used together with Nexus's adaptive authentication and single sign-on platform Hybrid Access Gateway.

Convenience

Easy to use and easy to integrate in all your online applications.

Freedom

No need for additional hardware tokens.

Today's businesses operate 24/7/365 and to stay attractive organizations need to provide their end users with the capability to access services and information wherever and whenever they need it.

Personal Mobile increases the end user convenience. Your mobile device is always with you and you do not need any extra tokens or readers that require installation.

Key features

- No need for additional hardware tokens, such as cards or readers, which reduces the total cost of ownership and enhances usability.
- Push notifications in the mobile phone for immediate communication with the user.
- Ready to use app for download via Apple's App Store and Google Play.
- Software development kit (SDK) available for embedding in your own app.
- Strong protection of the private keys by multiple encryption layers and device-binding.
- Easy enrollment process for the end user via a QR code.

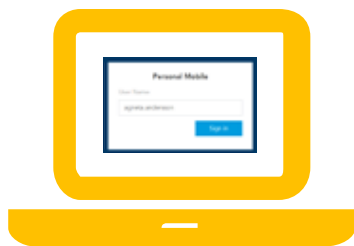

Enables digitalization

In the era of digitalization and the explosion of mobile services, Personal Mobile is the linking piece of software that makes authentication available for the mobile work-force using online applications.

Personal Mobile offers a comprehensive set of use case scenarios for 2FA

- **Online banking, insurance and retail** Convenient and highly secure access to services, as opposed to username and password, and increased trust in customer care engagement, to comply with “know your customer” policies.
- **Enterprise** Easy access to the corporate network resources and cloud services through federation and single sign-on.
- **Public sector** Electronic identities used for e-government services and strong Level of Assurance with face-to-face enrollment.

How to login with Nexus Personal Mobile

1. Sign in

2. PIN / Fingerprint

3. Access
