

# Personal Messaging overview

[Nexus Personal Messaging](#) includes the components [Hermod](#) and [Nexus Push Service](#), that can be used separately or in combination.

## Personal Messaging components

### Hermod

Hermod is a web-based service for online authentication and signing using [Nexus Personal Mobile](#) or [Nexus Personal Desktop](#). Hermod allows for example the same processes, APIs, and workflows to be used for mobile and desktop (smart card, soft token).

### Nexus Push Service

Nexus Push Service is used to send notifications to mobile apps that there are pending user requests such as sign and authenticate.

### Overview

For an overview of how Personal Messaging is related to other components, see [Nexus Personal overview](#).
