

ID06 in English

New card standard is introduced

October 20, 2018, ID06 AB introduced a new card standard. The new card standard has a trust level called LoA 2 (Level of Assurance 2), which means increased security in the ID06 system and at the construction sites. The purpose of the new standard is to increase security and to secure the identity and link between cardholders and the company. This minimizes the risk of copying or otherwise manipulating cards. All companies must be registered again and all employees must get new cards.

Read more about ID06

ID06's mission is to help ensure that "the right person is on the construction site, and is connected to the right employer".

The purpose of the ID06 credentials and attendance registration is to obstruct black work and other financial crime, thereby strengthening healthy competition. The system also helps to simplify workplace safety. For efficiently functioning accident prevention work it is vital to know and be able to control who is staying at the workplace, what work is going on and what safety instructions each individual has received. ID06 helps with this.

Mobile ID06 Card

ID06 will later launch a secure application for a mobile ID06 card.

The mobile ID06 card can be compared to a mobile eID, such as Mobilt Svenskt Bank ID, and it has the same basic functions as the physical ID06 card. It can thus be used for registration in electronic personnel registers and for entry and exit at the workplace.
